

1		Powerstock Common Bridge	Highways England Forum recommend retention of bridge. Draft stabilisation scheme being prepared. Meeting and presentation to Parish Council being prepared for January 2024. Dorset Council understood to be preparing improved drainage scheme. Meeting arranged with Highways England for 10th January 2024 and attendance afterwards at Parish Council meeting.	Following a site meeting earlier that day attended by NF and JS officers from Highways England set out the structural issues with the railway bridge and possible long-term solutions. These options were based around the heritage value of the bridge, current structural condition of the bridge, repair options, landowner consents/refusals, impact on current flooding/drainage issues and improvement options and capital v revenue costs. (i)That the preferred option of the Council is for the bridge to be demolished and that Highways England work with Dorset Council to raise the road level to reduce the impact of long-term flooding. (ii)If Highways England determine that the bridge should remain then the eastern side abutments be repaired by anchoring and in conjunction with Dorset Council an appropriate drainage improvement scheme be undertaken contemporaneously with bridge improvement works. (iii)The condition of the west side abutments be kept under review unless the landowner agrees to anchoring works being undertaken on their land. Chairman invited to meeting to decide future of bridge. July 2024 - Awaiting final decision on future of bridge from Highways England. If to demolish at least 18 months before any works	Open
2	site visit with DC	Highway matters	Re-profiling of High Street and cutting back verges	Reprofiling of High Street including School Lane	Open
